### a technology partner with new insight

Founded in 2003, Lencor Technology Inc. takes an innovative approach to providing business - class software, hardware, services, & consulting. Our main goal is to help our customers solve critical business issues, by incorporating new functionality into their existing software & hardware systems. Our forward thinking technology solutions provide your business a variety of options to increase levels of production, efficiencies, & business automation. Lencor's business was built off of a single methodology of recycling and re-using your current technology. By doing this we provide our clients a cost effective alternative to purchasing new IT systems in efforts of overcoming the business challenges associated with today's ever - changing economic times. All Lencor solutions have a focal point around data & information management with specialties and expertise in areas which include:

- eDiscovery
- systems integrations
- governance/security
- disaster recovery
- retention scheduling
- advanced archiving
- intelligent capture
- compliance
- business process automation (BPA)

### maximize business governance & performance

Truly knowing where all corporate information resides, and who has either viewed or made copies of it is the number one culprit in the struggle of managing risk, compliance, and corporate governance. Lencor has technology that will help your IT teams and senior management monitor all electronic information as it works through corporate business polices. Lencor's governance and performance solutions use software tools such as information rights management, systems file and email retention scheduling, secured enterprise application integration (EAI), smart tagging, filtering, and legal holds on all electronically stored information (ESI), and automated business workflow performance indicators to easily manage all information, processes and policies throughout your organization.

an enlightened approach to corporate & government technology systems, structure, & strategy

### information technology consolidation

As company's information increases and grows over numerous databases, the ability to strategically store and manage data is adding costly complexities to IT infrastructures. Lencor's enterprise level integration solutions build a structured growth plan to offset out-of-control expenditures. Our team will integrate files, data, processes, and applications to deliver cost effective alternatives to your existing information management architecture. By embracing forwarding thinking technology such as Enterprise Document Integration (EDI), and eDiscovery tools, combined with custom software development, and pinpoint middleware solutions, Lencor Technology will help your organization consolidate its information, and provide an easy means to efficiently de-duplicate unwanted data and files. Our advanced archiving approach will lower infrastructure spending, while creating efficiencies in daily processes.

### corporate-wide "green" initiatives

As "green" initiatives are becoming front-line efforts within corporate and government organizations the ability to cost effectively implement and maintain such efforts can prohibit the actual cause. Lencor provides services and solutions which will help your business build solid paperless, business practices and prevent the reinstatement of paper into all processes. Some of the areas where we can help your business in are electronic forms, data capture, enterprise content management, electronic signatures, SaaS models, workflows, and process optimization modeling.

bringing environmentally fit and process efficient strategies to your business
